Introduction A wide variety of materials combines viscous behaviours with transverse isotropy. Examples of these are soft tissues in humans, animals or plants (Zulliger et al., 2004, Gasser et al., 2006, Wang et al., 2014). The mechanical behaviour exhibited by these soft tissues is known to involve complex phenomena such as large deformation and nonlinear response. It is weaker than "true" hard-paste porcelain, and does not require either the high firing temperatures or the special mineral ingredients needed for that. There are many types, using a range of materials. Sat, 08 Dec 2018 18:22:00 GMT Soft-paste porcelain - Wikipedia - Long term ground movements above a tunnel may continue to increase with time after tunnelling in clayey soils as the tunnelling-induced excess pore water pressures dissipate, whilst the changing earth pressure acting on the tunnel leads to further tunnel deformation during consolidation. Fri, 07 Dec 2018 15:10:00 GMT Long-term tunnel behaviour and ground movements after ... - The California bearing ratio (CBR) is a penetration test for evaluation of the mechanical strength of natural ground, subgrades and base courses beneath new carriageway construction. It was

developed by the California Department of Transportation before World War II. The basic site test is performed by measuring the pressure required to penetrate soil or aggregate with a plunger of standard area.
