Wed, 14 Nov 2018 12:31:00 GMT detection estimation and modulation theory pdf - Detection theory or signal detection theory is a means to measure the ability to differentiate between information-bearing patterns (called stimulus in living organisms, signal in machines) and random patterns that distract from the information (called noise, consisting of background stimuli and random activity of the detection machine and of the nervous system of the operator). An Introduction to Deep Learning for the Physical Layer - Lidar (also called LIDAR, LiDAR, and LADAR) is a surveying method that measures distance to a target by illuminating the target with pulsed laser light and measuring the reflected pulses with a sensor. Differences in laser return times and wavelengths can then be used to make digital 3-D representations of the target. The name lidar, now used as an acronym of light detection and ranging ... Arxivsorter ranks papers
from arxiv.org based on
your own interests.. It
simply asks for a few
favorite authors and then
estimates the relevance of
arbitrary papers using
information from
authorship proximity and
semantic similarity.. It is
