It has two major branches, differential calculus (concerning instantaneous rates of change and slopes of curves ... But over the summer I took this class while taking another online class and working 40 hours a week. This calculus class is not good for someone who plans on doing too many other things over the summer. GMT Integral Table - <http://library.umac.mo/ebooks/b31290735.pdf> - In this section we solve linear first order differential equations, i.e. differential equations in the form $y' + p(t)y = g(t)$. We give an in depth overview of the process used to solve this type of differential equation as well as a derivation of the formula needed for the integrating factor used in the solution process.
