Such analysis includes initial hazard identification, exposure and dose-response assessments, and risk characterization. Wed, 12 Dec 2018 14:35:00 GMT Ecological Risk Assessment | Risk Assessment | US EPA - contaminants in eggs of waterbirds. Estimated hazard quotients (HQs) of various contaminants in eggs of waterbirds are shown in Fig. 5. HQs were calculated by dividing the measured concentrations of specific contaminants in the

target species with critical effect concentrations below which no observed adverse effect is expected.
