Sun, 09 Dec 2018 21:41:00 GMT Engineering Design Representation - UF MAE - A screw is a type of fastener, in some ways similar to a bolt (see Differentiation between bolt and screw below), typically made of metal, and characterized by a helical ridge, known as a male thread (external thread). Screws are used to fasten materials by digging in and wedging into a material when turned, while the thread cuts grooves in the fastened material that may help pull fastened ... It is one of the six classical simple machines. The most common form consists of a cylindrical shaft with helical grooves or ridges

called threads around the outside. The screw passes through a hole in another object or medium, with threads on the inside of the hole that ...
