For example, the atomic number of oxygen is 8, so the element oxygen consists of all atoms which have exactly 8 protons.. 118 elements have been identified, of which the first 94 occur naturally on Earth with the remaining 24 being synthetic elements. Principles and Calculations in Chemical Engineering - In chemistry and manufacturing, electrolysis is a technique that uses a direct electric current (DC) to drive an otherwise non-spontaneous chemical reaction. Electrolysis is commercially important as a stage in the separation of elements from naturally occurring sources such as ores using an electrolytic cell. The voltage that is needed for electrolysis to occur is called the decomposition ...
