encyclopedia of food
mycotoxins pdf A
mycotoxin (from the Greek
μύκη, "fungus" and
τοξικόν, "poison") is a toxic
substance produced by
certain fungi. Aflatoxins
are among the most
potent natural
carcinogens. They are
produced by Aspergillus
and Penicillium species.
Aflatoxins are highly
stable to heat and
acidic conditions.
They are found in
a variety of foods,
including grains, nuts,
and soybeans. Aflatoxins
are also found in
animal products, such as
milk and meat, from
animals that have
consumed contaminated
feed. Aflatoxins are
resistant to cooking and
digestion. They are
absorbed into the
bloodstream and can
cause liver damage and
cancer. Aflatoxins are
also found in
moldy peanuts and
soybeans. Aflatoxins
are a major concern
for food safety and
public health.
