A material is pushed through a

die of the desired cross-section. The two main advantages of this process over other manufacturing processes are its ability to create very complex cross-sections, and to work materials that are brittle, because the material only encounters compressive and shear stresses. Wed, 05 Dec 2018 16:17:00 GMT Extrusion - Wikipedia - Modern food industry operation entails sophisticated automation and control architecture. By applying the proven success of modern control technology to most of its operations including food preservation, manufacturing, packaging, and handling, the productivity of food plants can be significantly improved. Blown film extrusion is a technology that is the most common method to make plastic W films, especially for the packaging industry. The process involves extruding a tube of molten polymer W through a die and inflating to several times its initial diameter to form a thin film bubble. This bubble is then collapsed and used as a lay-flat film or can be made into bags. Fri, 07 Dec 2018 14:27:00 GMT Blown film
