Tue, 15 Jan 2019 21:33:00 GMT Chemistry: An Introduction to General, Organic, and ... - Life is a characteristic that distinguishes physical entities that have biological processes, such as signaling and self-sustaining processes, from those that do not, either because such functions have ceased (they have died), or because they never had such functions and are classified as inanimate. Various forms of life exist, such as plants, animals, fungi, protists, archaea, and bacteria.  
Mon, 14 Jan 2019 18:57:00 GMT Life - Wikipedia - Abiogenesis, or informally the origin of life, is the natural process by which life arises from non-living matter, such as simple organic compounds. While

the details of this process are still unknown, the prevailing scientific hypothesis is that the transition from non-living to living entities was not a single event, but a gradual process of increasing complexity that involved molecular self ...
