System Sun, 02 Dec 2018 08:49:00 GMT Performance Analysis of Regenerative Feed Water Heating ... - Power-system protection is a branch of electrical power engineering that deals with the protection of electrical power systems from faults through the isolation of faulted parts from the rest of the electrical network. The objective of a protection scheme is to keep the power system stable by isolating only the components that are under fault, whilst leaving as much of the network as possible ... Sun, 14 Oct 2018 10:02:00 GMT Power-system protection - Wikipedia - In an electric power system, a harmonic is a voltage or current at a multiple of the fundamental frequency of the system, produced by the action of non-linear loads such as rectifiers, discharge lighting, or saturated magnetic devices. Harmonic frequencies in the power grid are a frequent cause of power

quality problems. Harmonics in power systems result in increased heating in the equipment ...
