Mon, 10 Dec 2018 04:08:00 GMT Electronegativities of the elements (data page) - Wikipedia - A period in the periodic table is a horizontal row. All elements in a row have the same number of electron shells. Each next element in a period has one more proton and is less metallic than its predecessor. Arranged this way, groups of elements in the same column have similar chemical and physical properties, reflecting the periodic law. For example, the alkali metals lie in the first column ...

This strategy relies on electrophilic activation coupled to in situ selective selenium-mediated dehydrogenation. Mechanistic experiments suggest formation of an electrophilic Se IV species.
