

solidification and crystallization—processing in metals and alloys

Fri, 07 Dec 2018 13:51:00 GMT solidification and crystallization processing in pdf - Crystallization of polymers is a process associated with partial alignment of their molecular chains. These chains fold together and form ordered regions called lamellae, which compose larger spheroidal structures named spherulites. Polymers can crystallize upon cooling from the melt, mechanical stretching or solvent evaporation. Crystallization affects optical, mechanical, thermal and ... Recrystallization is usually accompanied by a reduction in the strength and hardness of a material

and a simultaneous increase in the ductility. Thus, the process may be introduced as a deliberate step in metals ...
